Introduction

Individuals within each population exhibit a characteristic range of world region scores. The following tables list scores by percentile for Caucasians, African-Americans and Hispanics living in the United States. These percentiles provide the range of expected scores for individuals within each group.

For instance, half of all U.S. Caucasians obtain a Northwest European score between 4.22 and 68.04, with a median score of 16.64. Northwest European scores within this range could be considered ordinary for Caucasian individuals. Only five percent of Caucasians obtain a score either below 0.64 or above 534.46. These can be considered very low and very high scores within this ethnic group, respectively.

Caucasian (U.S.A.)

	5% <i>(very low)</i>	25% <i>(ordinary)</i>	50% <i>(ordinary)</i>	75% <i>(ordinary)</i>	95% <i>(very high)</i>
